

VISTA

# VISTA GRAPHICA™

## SIMPLE GRAPHICAL USER INTERFACE FOR ALL TRIPLEX™ COLUMBUS DVR'S

### SIMPLE GRAPHICAL USER INTERFACE

Vista Graphica™ acts as a virtual matrix - allowing multiple camera feeds from different Columbus units on a network to be streamed onto the same graphical maps on a single, or multiple, PC network. Full control options, including record and playback, are available for each Columbus unit and a virtual joystick function allows full PTZ control of the Vista PowerDome™.

Set-up and installation couldn't be simpler with full, intuitive wizards coupled with a simple drag & drop camera and DVR location icon utility for ease of use. Not only that but Graphica is fully backwards compatible with previous network versions of Columbus for retro-fit opportunities, providing a professional Graphical User Interface (GUI) for the Vista Triplex™ and connected cameras. Graphica comes enabled to integrate with the Impro Technologies Access Control System providing a complete CCTV and Access Control solution.

#### IDEAL FOR APPLICATIONS SUCH AS:

- Small, medium and large commercial and industrial applications
- Sports stadiums and related administration buildings
- Airports
- Ministry of defence
- Government agencies
- Schools and universities
- Shopping centres
- Conference centres
- Large parking garage
- Sites requiring an online GUI for a manned security office

#### MAIN FEATURES:

- 1, 4, 8 and 16 User Options via software dongle
- Import JPEG or Gif images to represent layout of sites/buildings/floor plans
- Connects up to 20 Columbus units via TCP/IP network
- Powerful date & time search facility on single or multiple cameras
- Alarm monitoring on all configured columbus units
- Once set up the site can be operated and navigated totally by a mouse
- The user has full functionality of the CCTV system through the GUI
- The user can have any number of buildings with any number of floors per building
- Quick editing of DVR and camera names and configuration parameters
- Site easily navigated with full functionality of CCTV system via the GUI
- Full CCTV/Access Control system integration
